Monitoring of Failures

SHP Angel® want to ensure that any issues that present themselves on your Control System are actioned and resolved within an efficient and timely manner. Keeping your plant healthy and online with minimum disruptions and production loss is key to the SHP Angel® support success.

We have a dedicated support service that can provide emergency 24/7 cover to your automation system. We are able to implement routine general maintenance support and improvement works that maybe required for your site.

The main aim of SHP Angel® is to identify problems and resolve them before they become an issue within your plant.

Asset Life-Cycle with

MAINTRACE®
MAINTAINING TRACEABILITY

Total asset lifecycle and total cost of ownership are available at the touch of a button.

Maintrace® is a Computerised Maintenance Management System (CMMS) that is designed to simplify and improve the Maintenance and Traceability of your process plant assets and equipment.

Every physical asset goes through a life-cycle beginning with its conception and ending at its disposal. In every phase of the life-cycle numerous errors and mistakes can occur that leave defects within the asset to eventually leading to breakdowns, losses and wastage during operation.

Maintrace® allows you to schedule the maintenance tasks of your assets and can automatically calculate the recommended maintenance intervals. Time and financial resource reports are able to be generated based on individual assets and plant areas. You are able to produce and store all calibration records for your assets eliminating the need to adopt complicated filing and record keeping of numerous paper documents – previous maintenance and calibration history is available at the click of a button saving you time locating paper documents during audit periods.

vs OEM

The part that an OEM plays is normally focused on supply and maintenance of their own equipment. However, with an OEM you are strictly limited to the opportunities for customisation. SHP® are proud to remain totally vendor-neutral. With no formal distribution or approved service partnerships with any OEM, we can always recommend and provide the right piece of equipment that is fit for purpose - within specification and budget.

With having fewer development costs and overheads compared to the OEM's, SHP® are often proven to provide a more cost-effective, and timely response in comparison. This is reflected by our customers positive response, and helps us maintain ***a reputation in control***

Engineering Expertise

Our Automation Guardian Angels are all industry timed-served and have a vast knowledge of automation and process control. Our team keep up to date with the knowledge, advancements and trends within the industry. We can support the legacy of past and offer improvement solutions that can bring you to the present.

A key strength is our exceptional experience and ability to construct a turn-key solution that best suits each customer's specifications. Our engineers focus on costs of failure caused by system downtime, cost of spares, repair equipment and personnel.

Research, Development, and Workshop Facility

SHP® are proud to have a dedicated workshop with R&D test facilities. This is equipped with a vast array of OEM solutions. SHP® can develop, integrate and test with actual equipment as opposed to simulation alone. We find more customers are utilising this facility to deliver bespoke solutions that satisfy their process control, automation and improvements.

Our R&D ability could help your site become more efficient and improve product quality and repeatability.

Which of the packages is best for your company?

	Raphael	Gabriel	Michael
